

12. MINOTS LEDGE TO PROVINCETOWN, MASSACHUSETTS

(1) This chapter describes the Massachusetts coast southward from Minots Ledge, off Cohasset Harbor, to and including Cape Cod Bay. Also discussed are the principal harbors of Cohasset, Scituate, Green, Duxbury, Plymouth, Barnstable, Sesuit, Rock, Wellfleet, Pamet, and Provincetown, and New Inlet and its tributaries. Provincetown and Plymouth with their seafood handling and processing facilities and fleets of fishing vessels are the principal commercial harbors. Pleasure boating is prevalent with some commercial fishing at the other harbors.

(2) **Chart 13269.—Minots Ledge Light** (42°16.2'N., 70°45.5'W.), 85 feet above the water, is shown from a 97-foot dark gray conical tower on **Outer Minot**. A fog signal is at the light. This ledge, which uncovers 3 feet, is about 6 miles south-eastward of Point Allerton and 1 mile north-northeastward of **Strawberry Point**, the northeastern extremity of **Scituate Neck**. Outer Minot is the outermost of the visible dangers off the entrance to Cohasset Harbor.

(3) Submerged rocks and very broken ground, on which the sea breaks in heavy weather, extend more than 1 mile northeastward and 2.5 miles eastward of the light. This area should be avoided.

(4) Numerous rocks and ledges extend westward and southward from the light across the entrances to Cohasset Harbor. **East Shag Rock**, 7 feet high and marked by a buoy, and **West Shag Rock**, 6 feet high, are the most prominent southwestward of the light. Shifting boulders are reported on the shoal just eastward of **Barrel Rock** (42°15.5'N., 70°47.1'W.), marked by a daybeacon.

(5) Three natural channels lead into **Cohasset Harbor** through the area of rocks and ledges: **Western Channel**, which enters between **Brush Ledge** and **Chittenden Rock**; **The Gangway**, a passage which leads between **The Grampuses** and **West Hogshhead Rock**; and **Eastern Channel**, which leads between **Enos Ledge** and **West Willies**. Although all three channels are marked by buoys, there are numerous unmarked dangers.

(6) The Gangway passage is the widest, but there are unmarked 9- and 10-foot rocky shoals in the middle of it, and it should be used only in clear weather and with a smooth sea, even in small craft. Eastern Channel is the clearest and deepest of the three. The best time to enter is on a rising tide.

(7) **COLREGS Demarcation Lines**.—The lines established for this part of the coast are described in **80.135**, chapter 2.

(8) **Cohasset Harbor** is a large shallow bight southwestward of Minots Ledge Light and about 6 miles southeastward of Point Allerton. The harbor is frequented by numerous yachts and fishing craft. A prominent lookout tower is near the summit of a hill eastward of **The Glades** on the east side of the harbor. Anchorage is available in depths of 6 to 10 feet in the outer harbor.

(9) **Cohasset Cove**, the inner harbor, is protected by a breakwater which extends about 0.1 mile northward from near the westerly end of **Bassing Beach**. The breakwater is partially covered at high water.

(10) A dredged channel leads southward from the outer harbor to an anchorage basin southward of Bryant Point in Cohasset Cove, the inner harbor. There are three additional dredged anchorage areas: one is immediately southward of the Cohasset Cove anchorage; one in **Bailey Creek**, in the southeastern part of the inner harbor; and one immediately westward of the southern

end of the Cohasset Cove anchorage. In January 1999-February 2000, the controlling depths were 6½ feet to Cohasset Cove anchorage, thence 5 to 7 feet in the anchorage, thence 4 feet in the anchorage southward of Cohasset Cove anchorage, thence 4 feet in the easterly anchorage in Bailey Creek, and 4 feet in the westerly anchorage shoaling to 1½ feet at the head of the project. The channel into Cohasset Cove is marked by lights and buoys; a light is off **Bryant Point**.

(11) A rock, which uncovers 6½ feet, is in 42°14'21"N., 70°47'15"W., close to the southerly edge of the channel leading to the anchorage in Bailey Creek. Another rock, covered about 1 foot, is reported in the westerly anchorage, about 65 yards north-eastward of the town landing on the southerly side of the anchorage; caution is necessary when maneuvering around the service wharves eastward of this landing.

(12) **Cohasset** is a town on the west side of the inner harbor. There is some fishing, but the town is mostly residential. The Cohasset Yacht Club, close westward of Bryant Point, has depths of 5 to 8 feet reported alongside its float landing; water is available. A service facility is on the south side of the westerly anchorage; gasoline, ice, provisions, and marine supplies are available. The town maintains four float landings in various parts of the inner harbor; depths of 3 to 5 feet are reported alongside these landings. The **harbormaster** maintains an office in a cottage which overlooks the town wharf southwestward of the entrance to Bailey Creek. The Cohasset Sailing Club, about 100 yards eastward of this town landing, has a depth of 3 feet reported alongside its float landing. A small-craft launching ramp is about 150 yards eastward of the sailing club.

(13) A boatyard is just westward of the dam at the head of the inner harbor. Depths of 9 feet are reported alongside the yard's float landing. The marine railway at the yard can handle craft up to 55 feet in length or 80 tons for hull and engine repairs or open or covered storage; gasoline and water are available.

(14) Cohasset Harbor is usually closed by ice for about 2 months during normal winters.

(15) **Stellwagen Ledges**, consisting of rocks awash and covered, extend 3.8 miles south-southeastward from Davis Ledge to Tar Pouch. Some of these ledges lie over 1 mile from shore and are covered 5 to 16 feet in surrounding depths of 4 to 9 fathoms. Most of them are unmarked. Strangers should keep over 3 miles from shore.

(16) **Davis Ledge**, covered 13 feet and marked by a lighted gong buoy, is about 0.4 mile eastward of Minots Ledge Light. **Tobias Ledge**, about 0.25 mile eastward of Strawberry Point, is marked by a daybeacon. **Tar Pouch**, covered 14 feet and marked on the northeast side by a buoy, is about 1 mile northeastward of the entrance to Scituate Harbor. In October 1981, a sunken wreck was reported about 0.5 mile northeast of the entrance to Scituate Harbor in about 42°12.5'N., 70°42.4'W.

(17) **Scituate Harbor**, about 4 miles southeastward of Cohasset Harbor, is used mostly by yachts and fishermen, and occasionally as a harbor of refuge by dragger.

(18) **Cedar Point**, on the north side of the harbor, is marked by a white abandoned lighthouse tower maintained by the town of **Scituate**, which is on the west side of the harbor. The harbor is partially protected by breakwaters.

(19) The north breakwater extends about 300 yards southeastward from the southeast extremity of Cedar Point. **Scituate**

North Jetty Light 2A (42°12.2'N., 70°42.8'W.), 23 feet above the water, is shown from a white skeleton tower with tankhouse and a red triangular daymark on the seaward end of the north breakwater. The south jetty extends about 100 yards northward from the southern point of the entrance. A lighted gong buoy, 0.7 mile eastward of the north breakwater, marks the approach to the harbor. About 1 mile northwestward of the entrance is a group of tall radio towers which are very conspicuous when approaching the harbor.

(20) On the high land about 2 miles westward of the entrance to Scituate Harbor, there is a conspicuous high tower with pointed top which is visible many miles from seaward.

(21) It is reported that the bar at the entrance breaks entirely across the channel at low tide and in heavy weather. The most unfavorable weather is from the northeast. The harbor is free of ice most of the winter.

(22) **Channels.**—Scituate Harbor is entered by a dredged channel which leads through the entrance to just inside the jetties, thence to an anchorage basin at the south end of the harbor. In May 1999, the controlling depth was 7 feet with lesser depths along the southeast limits, and then 6½ to 10 feet available in the basin. Another dredged anchorage basin north of the entrance channel, just inside the jetties, had depths of 4½ to 10 feet with shoaling along the northwest limit. Depths of about 6 feet are available in the cove in the southeastern part of the harbor. The channel is marked by buoys and uncharted private buoys that are frequently shifted with changing conditions. A channel leads southward from the harbor channel to the Scituate Coast Guard Station pier on the east side of the harbor. The channel had a reported controlling depth of 8 feet in August 1996.

(23) The mean range of tide is 8.8 feet.

(24) The Scituate Harbor Yacht Club is on the west shore of the harbor, about 0.5 mile westward of the jetty light. Depths of 8 feet are reported alongside the outer floats; gasoline and water are available. Southward of the yacht club are the Satuit Boat Club and the Satuit Waterfront Club. Between them there are two small-craft launching ramps and a marina with depths of 4 to 6 feet reported alongside the berths and 8 to 10 feet reported alongside its service float. Gasoline, diesel fuel, electricity, and water are available. The Scituate town pier is on the west side of the harbor, about 0.6 mile above the jetty light. Another marina with several floats is close southward of the town pier; gasoline, diesel fuel, and water are available. A large parking lot is at the marina. A public dock and a small-craft launching ramp are just southward of the marina.

(25) A boat storage yard, at the head of the cove at the southeast end of the harbor, has a 10-ton marine railway that can handle craft up to 35 feet in length for hull and engine repairs to stored craft. Gasoline, electricity, and water are available at the service float, which has a reported depth of 6 feet alongside.

(26) Marine supplies, boat rental, tackle, and most services are available at the marinas and the boat storage yard. Groceries and lodging are available within walking distance.

(27) On the south side of the entrance to Scituate Harbor is a bluff known as **First Cliff**. A similar formation, known as **Second Cliff**, is about 0.6 mile south of the entrance.

(28) **Chart 13267.**—**New Inlet**, on the north side of **Fourth Cliff** and 2 miles southward of Scituate Harbor, is the approach to North River and South River.

(29) The inlet had a reported depth of about 10 feet over the bar in June 1979. It is marked by a fairway bell buoy off the entrance and by several channel buoys, but the channel is subject to change and is never entered except by small craft with local knowledge. Strangers should not attempt to cross the bar on the ebb with an easterly wind or in heavy seas as waves break across the bar. The bar consists of boulders that are reported to be particularly numerous on the south side of the inlet. A strong current flows out of the inlet during the falling tide.

(30) In May 1993, a submerged rock was reported near the center of the channel about 20 yards southwest of Buoy 4.

(31) Sand and gravel were formerly shipped from a wharf on the east bank about 1 mile above the mouth of **Herring River**, a tributary of North River from the north. Uncharted private buoys that are frequently shifted with changing conditions mark the river. In 1979, it was reported that with local knowledge about 4 feet could be carried to the wharf and to a marina in a basin about 0.4 mile above the wharf. The marina boatyard has a 25-ton mobile hoist that can haul out craft up to 60 feet in length for hull and engine repairs, or dry covered or open winter storage. Gasoline, diesel fuel, electricity, and water are available at the floats, which have a reported 3 to 6 feet alongside. Ice, provisions, and marine supplies can be obtained at the marina, and restaurants are available nearby.

(32) **North River** formerly emptied into the sea near **Rexhame**, but its present outlet dates from the great storm of 1898. The river has been partly cleared of boulders to **Hanover**, 10 miles above the entrance. The depth to this point is about 2 feet. Local knowledge is advisable to navigate the river. Navigation at spring tides in excess of 9 feet above mean low water is difficult because of flooding of large areas of marshland on either side of the river. The channel to the State Route 3A bridge is partially marked by privately maintained stakes in the summer.

(33) About 1.4 miles above the mouth, the south abutment of an abandoned railway bridge, which has been removed, is used as a town landing. There are no services at the float, which has 6 feet reported alongside. The channel is very narrow here, and the currents flow strongly, especially on the ebb.

(34) State Route 3A highway bridge crossing the river about 1.65 miles above the mouth has a 32-foot fixed span with a clearance of 12 feet. The second highway bridge about 4 miles above the mouth has a 27-foot bascule span with a clearance of 6 feet. (See **117.1 through 117.59 and 117.613**, chapter 2, for draw-bridge regulations.)

(35) There are two marinas at the first highway bridge. The one on the north bank just east of the bridge is principally for outboards; a small-craft launching ramp and a 20-ton crane are at the facility. The marina on the south bank just west of the bridge has gasoline and water available at a float which had 3 feet of water reported alongside and a paved small-craft launching ramp. Outboard boat rental and bait are available.

(36) About 1.5 miles above the first highway bridge, at Kings Landing, is a boatyard. Boats up to 40 feet in length are hauled out on skids for hull and engine repairs or open winter storage. The river has a posted **speed limit** of 5 miles per hour.

(37) **South River**, emptying through New Inlet from southward, is used by fishermen and yachtsmen. **Humarock** is a small village on the beach between South River and the ocean, 1.5 miles southward of New Inlet. Local knowledge of the river channel is advisable to navigate to the town. In 1979, the reported controlling depth was 3 feet from the entrance to the first bridge

and thence shoaling to bare about 350 yards above this bridge. In April 1985, a sunken wreck was reported in the channel in about 42°08'50"N., 70°42'10"W. The channel is marked by privately maintained and uncharted buoys that are frequently shifted with changing conditions.

(38) The first highway bridge crossing the river about 1.9 miles above the mouth has a 30-foot fixed span with a clearance of 11 feet. There is a marina on the east bank just north of the bridge, and another on the west bank just south of the bridge. Both marinas have small-craft launching ramps, and service floats with 2 to 5 feet reported alongside; water, gasoline, and electricity are available. The marina on the east bank has a 14-ton mobile hoist that can handle craft up to 43 feet, and the marina on the west bank has a marine railway that can haul out boats up to 40 feet in length for hull and engine repairs or dry open or covered winter storage. Ice, provisions, and marine supplies are obtainable, and restaurants and lodging are nearby. Guest moorings are maintained by the marinas. A **speed limit** of 5 miles per hour is posted on the river. The Marshfield Yacht Club is on the west bank about 0.3 mile above the first highway bridge; a depth of 4 feet is at the float landings. Water and electricity are available at the floats. The **harbormaster** can usually be found here. There is a boatyard on **Little Creek** about 0.5 mile northwestward of the first bridge. Boats up to 40 feet in length are hauled out at high water for dry winter storage and minor repairs.

(39) The second highway bridge about 2.5 miles above the mouth has a 24-foot fixed span with a clearance of 5 feet; there is little or no navigation above the second bridge.

(40) **Chart 13246.—Cape Cod Bay** is contained between the peninsula of Cape Cod, on the east and south, and the mainland of Massachusetts on the west. Between these limits the bay is about 20 miles in diameter with depths ranging from 10 to 32 fathoms, except close to the shore and in its southeasterly part. Race Point, the northwesterly extremity of Cape Cod, is the eastern point; and Gurnet Point, on the north side of the entrance to Plymouth Bay, is the western point of the entrance to Cape Cod Bay.

(41) Within the limits of Cape Cod Bay are several harbors, including those of Plymouth on the western shore, Sandwich and Barnstable on the southern shore, and Wellfleet and Provincetown on the eastern shore. It is also the approach to Cape Cod Canal, which connects Cape Cod Bay with Buzzards Bay.

(42) The shallow harbors of Cape Cod Bay, such as Plymouth, Barnstable, and Wellfleet, usually are closed to navigation by ice a part of each winter. This ice, together with the ice that forms in the shallower parts of Cape Cod Bay in severe winters, is driven by the winds out into the bay. There it masses into heavy fields or windrows, sometimes as much as 10 feet or more thick, making navigation in parts of the bay unsafe or impractical. The prevailing northerly winds drive the ice down to the southern end of the bay, but on a few occasions it has been known to obstruct Provincetown Harbor for several days. The movements of the ice depend largely on the winds, the tidal currents apparently have little or no effect.

(43) Deep-draft vessels entering Cape Cod Bay from the northward should pass eastward of the lighted whistle buoy which is about 7 miles northeastward of Brant Rock and well east of the extremity of the broken bottom extending over 4 miles offshore in this direction.

(44) **Northern Right Whales.**—Except for a narrow area along the west side, almost all of Cape Cod Bay lies within the federally designated critical habitat for northern right whales, the most endangered large whale species in the world (fewer than 350 animals). The designated critical habitat delineates the only known area where these whales give birth. These slow moving animals are vulnerable to collisions with ships and this is the leading cause of documented mortality for northern right whales. It is recommended that all large vessels (over 100 gross tons) operating in the critical habitat:

(45) (a) Keep a watch for whales during daylight hours.

(46) (b) Monitor NAVTEX transmissions for information on the location of right whales sighted in the vicinity. Local ships' pilots may also provide such information when it is available.

(47) (c) If a right whale is reported within 20 nautical miles of a vessel's intended course, it is recommended that the vessel proceed with caution during the 24 hour period following the time of the sighting. It is known that right whales can accelerate to a speed of approximately 6 knots. When it is believed that a vessel will pass in close proximity of whales, it may be reasonable and prudent to slow a vessel's speed accordingly, when a reduction in speed will not hinder the safe operation of the vessel. (See **50 CFR 226.101 and 226.203(b)**, chapter 2, for habitat boundary and regulations.)

(48) **Chart 13253.—Brant Rock** is a village about 5 miles southward of Fourth Cliff. The village derives its name from **Brant Rock**, a distinctive bare rocky islet about 300 yards offshore which is joined to the shore by a stone jetty. A square concrete tower in the village is very prominent. For about 1 mile south of Brant Rock to the entrance of Green Harbor River, foul ground extends offshore for nearly 1.5 miles to **Farnham Rock**, which is covered 14 feet. A lighted bell buoy is just eastward of the rock.

(49) **Green Harbor River** has its entrance west of **Blackmans Point** at the southern end of **Green Harbor Point**. **Bartlett Rock**, which uncovers 2 feet, and **Howland Ledge**, covered 7 feet, are 0.6 and 1.2 miles, respectively, eastward of the entrance. Both are marked by buoys. An obstruction reported covered 6 feet is about 75 yards south of a line between the buoys. In July 1987, an obstruction was reported just south of Bartlett Rock South Buoy 4 in about 42°04'34.2"N., 70°37'49.0"W. A small jetty is on each side of the entrance; the east jetty is marked by a light. A channel, marked by a buoy at the entrance and several buoys inside, leads to a turning basin about 0.6 mile above the seaward ends of the jetties. An anchorage basin is on the east side of the channel off the town wharf. In June 2000, the controlling depth in the entrance was 7½ feet to the foot of the jetties, thence 4½ feet in the west outside quarter of the channel to just below the anchorage basin, thence 2 feet at midchannel to the anchorage basin; the other parts of the channel have lesser depths, especially in an extensive area off Blackmans Point, where it gradually shoals to bare. In 1994-1997, the controlling depth was 1½ feet in the west half of the channel to the turning basin, thence in 1994, 1 to 4 feet in the basin, except with lesser depths toward the north and east sides. Depths of 2 to 5 feet were available in the anchorage basin with shoaling to 1½ feet in the northeast section. Local fishermen adjust their arrival and departure times so that they are not in the entrance channel 90 minutes on either side of low water. A current flowing out of the entrance channel during the falling tide reportedly sets up a rip just inside the entrance jetties.

(50) The town wharf is on the east bank about 0.4 mile above the jetties. Gasoline, diesel fuel, and water are available at the float landings at the wharf, which have a reported 4 feet alongside. There is a snack bar on the wharf, and restaurants and lodging are nearby. There are a large parking area and a small-craft launching ramp; party and charter boat hire are available. There is a marina just south of the town wharf with electricity and water available at the berths. Limited guest berths are maintained, and craft up to about 32 feet in length are hauled out on skids for open winter storage.

(51) **Green Harbor** is a small village on the west side of the river. Four prominent radio towers are just southwest of the village and 5 miles northward of the entrance to Plymouth Bay. A marina and the Green Harbor Yacht Club are on the west bank near the head of the harbor close southward of the causeway. Berthage, electricity, gasoline, water, marine supplies, and a small-craft launching ramp are available at the marina. The service float has 6 feet reported alongside. A 15-ton mobile hoist can haul out vessels for hull, engine, electrical, and electronic repairs, and for open winter storage.

(52) **High Pine Ledge**, awash at low water and marked on its easterly side by a buoy, is about 0.8 mile off **Duxbury Beach** and 2 miles northward of Plymouth Light. The ledge extends from the buoy nearly to the shore; vessels should not attempt to pass westward of the buoy.

(53) **Plymouth Bay** is about 20 miles southeastward of Minots Ledge Light. From its entrance, between Gurnet Point and Rocky Point, it extends about 2.5 miles westward to **Plymouth Beach**. **Warren Cove**, the southern part of Plymouth Bay, is sometimes used as a temporary anchorage.

(54) **Plymouth Harbor** is about 1 mile wide at its northern end, gradually narrowing to its southern end. Most of the harbor is dry at low water. The channels in Plymouth Harbor and tributaries usually have soft bottoms. The channel through the entrance is well marked and easily followed in clear weather.

(55) **Plymouth** is a town on the southwestern side of Plymouth Harbor. There is some waterborne commerce at Plymouth, most of it being fishing vessels and excursion boats. At the town wharf, fishing craft unload fish, scallops, and lobsters for shipment to New York and southern markets.

(56) **Duxbury Bay** is between Duxbury Beach on the east, Saquish Neck on the southeast, and the mainland on the west. It is about 3 miles long, with an average width of 2 miles. The bay is full of flats, mostly bare at low water, through which are several narrow and crooked channels. Shoals covered in spots by little water rise abruptly on both sides of these channels, and at low water the shoal edges are usually revealed by discolored water.

(57) **Duxbury**, a town on the west shore of the bay, is a summer yachting and residential resort.

(58) **Kingston Bay**, between the mainland and the western point of Duxbury Bay, is about 1.5 miles wide, and has numerous flats. Caution and local knowledge are advised. The village of **Kingston** is nearly 1 mile back from its western shore on **Jones River**. This bay is of little importance either as a harbor or port.

(59) **Prominent features.**—**Gurnet Point**, on the north side of the entrance to the bay, is marked by **Plymouth Light** (42°00.2'N., 70°36.1'W.), 102 feet above the water and shown from a white octagonal pyramidal tower with a white dwelling. A fog signal is at the light.

(60) **Rocky Point**, on the south side of the entrance, is about 3 miles south of Gurnet Point.

(61) **Duxbury Pier Light** (41°59.2'N., 70°38.9'W.), 35 feet above the water, is shown from a brown conical tower; a fog signal is at the light. The light, locally known as “Bug Light,” marks the north side of the channel and the south end of the shoal between the main channel and **Cowyard**.

(62) **Captains Hill**, on the peninsula between Duxbury and Kingston Bays, is about 200 feet high. On its summit is **Standish Monument**, 291 feet high, which can be seen from all directions when approaching the harbor. **Manomet Hill**, about 5 miles southward of Gurnet Point, is 390 feet high, heavily wooded, and conspicuous in approaching the entrance.

(63) The monument at Plymouth, a standpipe, and several tanks in and about Plymouth are conspicuous. A lookout tower on **Monks Hill** (see chart 13246), about 2.5 miles westward of Plymouth, and the buildings and stack of the former cordage company at **Cordage** are prominent. From eastward and north-eastward the buildings at Plymouth and the rectangular reactor building of the Pilgrim Nuclear Power Station southeast of Rocky Point are also conspicuous.

(64) **Plymouth Harbor Channel** is a dredged channel which leads southward from Plymouth Bay from a point 0.3 mile southward of Duxbury Pier Light to the State Pier at Plymouth, about 2 miles above the entrance, thence to a turning basin off the Town Wharf, about 0.2 mile above the State Pier. In 1987-March 1988, the midchannel controlling depth was 10 feet from the entrance to the turning basin, thence 7 feet in the basin. The channel is marked by a light with a white sector marking the entrance, buoys, another light, and private lighted ranges. The range structures are difficult to identify in the daytime.

(65) A breakwater is on the north side of the channel about 0.2 mile northeastward of the State Pier.

(66) A channel leads from the southerly end of Cowyard, westward of Duxbury Pier Light to the wharf of the former Plymouth Cordage Company, about 1.5 miles northwest of the Plymouth Town Wharf. The channel is marked by buoys. In 1964, shoaling to 9 feet was reported in the channel for about 0.6 mile westward of The Nummet. The section of the channel approaching the wharf is privately marked.

(67) **Duxbury Bay Channels.**—Where the several bay channels come together in the locality westward of Duxbury Pier Light, a channel extends northward up Duxbury Bay until west of **Clarks Island**. This channel, **Cowyard**, about 200 yards wide and with depths of 20 to 35 feet, offers good anchorage for small craft. The channel splits at a point westward of Clarks Island. The eastern branch, **Beach Channel**, is reported to be marked by private seasonal buoys and continues up the easterly side of Duxbury Bay. A highway bridge at **Powder Point**, at the junction of **Back River** with Duxbury Bay, has a 25-foot fixed span with a clearance of 5 feet.

(68) The western branch has a deep natural channel for about 1.5 miles from the area of Clarks Island northward of the fork in the channel. The channel to this point is buoyed and easily followed, and at this point connects with a dredged channel that leads northwesterly to an anchorage basin at the village of Duxbury. The dredged channel is known as the Yacht Club Channel and is buoyed. In December 1994-January 1995, the controlling depths were 5 feet in the dredged channel, except for shoaling to bare along the east channel edge between Buoy 14 and Buoy 18, thence 2 to 4 feet in the basin except for lesser depths along the east and north edges.

(69) **Anchorage.**—Vessels waiting to enter may anchor on the north side of the entrance channel southeast of Saquish Head and eastward of the buoy marking the extremity of the shoal that makes southward from that head, or they may proceed to the intersection of the bay channels and anchor where the swinging room is greatest, between 500 and 600 yards westward of Duxbury Pier Light.

(70) The best anchorage is in Cowyard, but small light-draft vessels often find good anchorage under the lee of Plymouth Beach. Yachts and small craft anchor in the anchorage basin off the wharves at Plymouth. In January 1983, the basin had depths of 8 feet except for shoaling in the northwest corner and along the north edge.

(71) **Dangers.**—**Outer Tautog Rock**, with 2 feet over it, is part of an unmarked shoal extending about 0.5 mile northward of Rocky Point.

(72) **Browns Bank** is in the central part of Plymouth Bay. Northward of Browns Bank, and between it and **Saquish Neck** and **Saquish Head**, is the entrance channel to Plymouth Harbor, Kingston Bay, and Duxbury Bay.

(73) The unmarked channels in Kingston Bay and Duxbury Bay are narrow and crooked and lead between flats bare or nearly so at low water; local knowledge is required to carry the best water. The best time for strangers to navigate these channels inside the harbor is at low water when the flats are visible.

(74) **Tides and currents.**—The mean range of the tide is 9.2 feet at the entrance off Gurnet Point and 9.5 feet at Plymouth. In the channel between Gurnet Point and Duxbury Pier the tidal current at strength has a velocity of about 1.4 knots. The set is generally in the direction of the channel; but the ebb sets southward and eastward across Browns Bank, while the flood sets northward and westward above Saquish Head, and sweeps strongly around Duxbury Pier Light northward into Cowyard.

(75) **Ice** often closes the harbor from about the first of January through February. When there is ice in the harbor, Cowyard is not a safe anchorage. In winter the safest anchorage from ice is in the channel southward or eastward of Saquish Head, and vessels sometimes go to sea on account of drift ice at this anchorage. Westerly winds tend to carry the ice out in fields. Normally the channel to the pier at Cordage is open to traffic all winter. Northwesterly winds sometimes bring ice in, but southerly winds clear it out.

(76) **Quarantine, customs, immigration, and agricultural quarantine.**—(See chapter 3, Vessel Arrival Inspections, and appendix for addresses.)

(77) **Quarantine** is enforced in accordance with regulations of the U.S. Public Health Service. (See Public Health Service, chapter 1.)

(78) Plymouth is a **customs port of entry**.

(79) **Harbor regulations.**—The several towns have harbor regulations that are enforced by the various **harbormasters**, who control the moorings. The Plymouth and Duxbury harbormasters maintain offices on their respective town wharves. The **speed limit** is 6 miles per hour in Plymouth Harbor.

(80) **Wharves.**—Fishing vessels discharge their catches at the town wharf at Plymouth and Duxbury. The town wharf at Plymouth has a reported 10 feet alongside its service float; a small-craft launching ramp is close by. The State Pier at Plymouth has 12 feet alongside. The replica of the MAYFLOWER is berthed on the south side of the State Pier.

(81) **Supplies.**—Gasoline, diesel fuel, and water are available at the Plymouth and Duxbury town wharves, and at most of the marinas and boatyards. Ice, provisions, bottled gas, and marine supplies are available at Plymouth and Duxbury. Motels, hotels, restaurants, laundromats, shops, and markets are in the area.

(82) **Repairs.**—There is a boatyard at Plymouth, one at **North Plymouth**, and several at Duxbury. These facilities can make hull, engine, and electronic repairs, and have storage facilities and marine supplies. The boatyard at Plymouth, about 0.2 mile southeastward of the State Pier, has a 10-ton crane, 60-ton boat lift, berths with electricity, gasoline, and diesel fuel. The largest marine railway at Duxbury can handle craft up to 50 feet in length; lifts up to 40 tons are also available. The boatyard at North Plymouth, close southward of the pier at Cordage, has a 75-foot marine railway and a 40-ton lift.

(83) **Small-craft facilities.**—There are well-equipped marinas at Duxbury and Plymouth at which gasoline and diesel fuel, water, berthing with electricity, and most yacht services are available. Small-boat launching ramps, both public and private, are available. The Duxbury Yacht Club, at the northwest corner of the turning basin at Duxbury, and the Plymouth Yacht Club, about 0.3 mile southward of the State Pier at Plymouth, offer various services to visiting yachtsmen. Gasoline is available at the Plymouth Yacht Club float.

(84) **Communications.**—Plymouth has local taxi service and bus service to Boston and other inland points. Numerous truck lines serve the area.

(85) **Chart 13246.**—Between Rocky Point and Manomet Point, there are several outlying rocks which will be avoided by giving the shore a berth of 1 mile. The shore is backed by high wooded hills, the most conspicuous of which is Manomet Hill, 390 feet high. **Manomet Point** is a bluff about 2.4 miles southeast of Rocky Point. Also prominent is the large rectangular reactor housing of the Pilgrim Nuclear Power Station, about 0.4 mile southeastward of Rocky Point. Seaward of the power station, stone breakwaters enclose a basin from which cooling water is obtained. This basin is hazardous to approach in heavy weather since seas break over the breakwaters. A private buoy is about 0.3 mile eastward of Rocky Point.

(86) **White Horse Beach** is a summer resort northwest of Manomet Point. **White Horse Rocks**, 10 feet high, and a group of rocks awash are part of an unmarked shoal which extends about 0.7 mile northward from White Horse Beach.

(87) **Mary Ann Rocks**, two rocks that uncover about 5 feet, are 0.7 and 0.9 mile southeastward of the northerly end of Manomet Point and are marked by a lighted whistle buoy, 0.8 mile eastward from the outer rock. **Stone Horse Rocks**, awash at low water, are southwestward of Mary Ann Rocks and form a part of a reef extending about 1 mile southeastward from Manomet Point.

(88) **Stellwagen Rock**, covered 7 feet and unmarked, is 1.7 miles southward of Manomet Point and 0.8 mile from shore.

(89) From Manomet Point to **Peaked Cliff**, a distance of 7 miles, the shore is a line of high bluffs backed by woods. Shoals with little water in places extend 0.6 mile from shore just southward of **Center Hill Point**. A standpipe on 140-foot-high **Indian Hill**, about 1.5 miles north of Center Hill Point, is prominent.

(90) **Ellisville Harbor** is a small-boat harbor about 0.4 mile northward from **Lookout Point**. The entrance, which is almost

bare, is protected by a small jetty on the northern side. The basin is shoal and available for small craft only at half tide or better.

(91) From Peaked Cliff the shore is low and trends southeastward. At the resort town of **Sagamore Beach**, 2 miles northwestward of Cape Cod Canal, a standpipe is prominent.

(92) **Chart 13236.—Cape Cod Canal** is a deep-draft sea-level waterway that extends westward from Cape Cod Bay to the head of Buzzards Bay. The waterway has a project depth of 32 feet and a least overhead clearance of 135 feet. The eastern entrance to the canal is marked by a lighted **244°54'** range, lighted and unlighted buoys, a light, a fog signal, and a radiobeacon. A tall strobe-lighted stack and buildings of the powerplant on the south bank of the canal about 0.75 mile above the eastern entrance, is prominent.

(93) **COLREGS Demarcation Lines.**—The line established for the eastern entrance to the Cape Cod Canal is described in **80.135**, chapter 2.

(94) A detailed description of the Cape Cod Canal and its facilities is given in **United States Coast Pilot 2, Atlantic Coast, Cape Cod to Sandy Hook**.

(95) **Chart 13246.—Cape Cod** is a long peninsula forming the easterly extremity of Massachusetts. It makes out from the mainland in an easterly direction for 31 miles, thence extends northward and westward for over 25 miles. The portion of Cape Cod between Cape Cod Canal and Chatham is known as the **Upper Cape**. This region is wooded and has numerous towns and villages. The northern trend of Cape Cod, forming what is sometimes termed the **Hook of the Cape**, is known as the **Lower Cape**. This section is well settled and composed almost entirely of sandy lands with high, bare sand dunes, and low, nearly level plains. Much of the outer shore of the lower cape is part of the Cape Cod National Seashore under the U.S. Department of the Interior.

(96) **Sandwich Harbor** (see also chart 13229), 1 mile south-eastward of the eastern entrance of Cape Cod Canal, is the approach to the town of **Sandwich**. The shore in front of the town is low marsh, faced by a sand beach. In 1979, the channel to the town was bare at low water. The harbor is suitable only for small craft; currents are weak and variable. There are no waterfront facilities at Sandwich Harbor, but fuel, water, and other services are obtainable at the East Boat Basin just inside the entrance to Cape Cod Canal.

(97) (See page T-5 for **Sandwich climatological table**.)

(98) **Springhill Beach** extends 2.3 miles southeastward from Sandwich Harbor to Scorton Harbor. The latter harbor is surrounded by sand dunes backed by cultivated lowlands.

(99) **Scorton Harbor**, 3.5 miles southeastward of the entrance of Cape Cod Canal, has a narrow jettied entrance bare at low water. Small local pleasure craft sometimes enter the harbor at half tide or higher. The harbor has no wharves. **Scorton Ledge**, an unmarked 12-foot ledge, is 0.7 mile north-northeastward of the entrance.

(100) **Chart 13251.—Barnstable Harbor**, 10 miles eastward of Cape Cod Canal entrance, is the approach to the town of **Barnstable** and the village of **Yarmouth Port**. It is used mostly by local fishing and charter fishing boats and pleasure boats. A seasonal lighted bell buoy, about 1.6 miles northward of Beach Point, marks the approach.

(101) **Prominent features.**—Prominent landmarks include the privately owned tower of a former lighthouse on the south side of Beach Point; a standpipe and a lighted radio tower at Barnstable; and a spire in Yarmouth.

(102) **Channels.**—The channel into Barnstable Harbor is marked by lighted and unlighted buoys. The bar channel is subject to change, and strangers should obtain local information before entering. With northerly winds a heavy sea makes on the bar, and vessels bound to Barnstable should take shelter in the eastern entrance to Cape Cod Canal or anchor in Plymouth or Provincetown Harbors until the weather moderates.

(103) In 1977, the channel in Maraspin Creek leading to the wharves at Barnstable had a controlling depth of 7 feet. Maraspin Creek Entrance Light, about 0.2 mile northward of Blish Point, is maintained from May to November by the town of Barnstable. From the light to **Blish Point**, the channel was privately marked by bush stakes in 1979.

(104) **Anchorage.**—Sheltered anchorage is available in the channel between Beach Point and Maraspin Creek entrance. Care should be taken to avoid the cable area extending southward from Beach Point.

(105) **Dangers.**—The entrance is obstructed by a shifting bar with about 5 feet over it. The harbor is nearly filled by flats and shoals which extend 2 miles off the entrance from the shore eastward of Beach Point. A lighted buoy about 210 yards east-southeast of Beach Point marks the outer extremity of the shoal extending southeastward from the point.

(106) The south side of the harbor is very foul with covered rocks and ledges most of which are unmarked; extreme caution should be exercised if heading for the yacht club without local knowledge. Several rocks near the channel leading to the yacht club are marked by private seasonal black mooring buoys; these aids should not be taken as marking the entrance to Maraspin Creek.

(107) **Tides and currents.**—The mean range of tide is 9.5 feet. Velocities of the tidal current in the entrance at strength average 1.3 knots, flooding southward and ebbing northward.

(108) **Ice** generally obstructs the harbor during a part of the winter.

(109) **Harbor regulations.**—Berthage at the float landings along the western and southern sides of Maraspin Creek are under the control of the **harbormaster**, who may be contacted through the Barnstable Town Hall, at Hyannis.

(110) **Small-craft facilities.**—A marina on the west side of the creek, about 200 yards southward of Blish Point, has 5 to 6 feet reported alongside its floats. Gasoline and diesel fuel are available at the service float, and ice, provisions, and marine supplies are obtainable nearby. There is a 20-ton mobile hoist that can haul out boats up to 55 feet in length for hull and engine repairs and dry covered or open winter storage.

(111) A marina, on the east side of the creek, is used primarily by outboard boats. Gasoline, water, and electricity are available at the float landings, which have a reported 3 feet alongside. Outboard motor repair and open winter storage are available for small craft which are hauled out using trailers. A paved town small-craft launching ramp is on the north side of this marina.

(112) Limited transient berths with 3 to 6 feet alongside with water and electricity available are maintained by the marinas and the town. A snack bar and other conveniences are at the harbor, and lodging, a grocery store, and restaurants are within walking distance.

(113) The Barnstable Yacht Club is on the southern side of Barnstable Harbor about 0.6 mile westward of the entrance to Maraspin Creek. Another paved town small-craft launching ramp is about 0.3 mile westward of the yacht club.

(114) In 1979, the channel to **Yarmouth** had shoaled over; it bares before low water, and the town landing is no longer used.

(115) **North Dennis** is a village 3.2 miles east-northeastward of Beach Point. **Scargo Hill**, 170 feet high and the highest hill in the vicinity, is southeastward of North Dennis.

(116) **Nobscusset Point**, 4.2 miles east-northeast of Beach Point, has a small breakwater which formerly provided a limited anchorage for small craft, but the area inside the breakwater is bare at low water.

(117) **Chart 13250.**—Between Barnstable and Wellfleet are several creeks which are used by local boats and launches at high water. All are dry at low water, except Sesuit Harbor. The 18-foot curve is from 0.2 to 0.3 mile from shore between North Dennis and Sesuit Harbor, but eastward of the latter it is 0.5 to 1.5 miles from shore.

(118) **Sesuit Harbor**, 5 miles eastward of Barnstable Harbor, has two jetties. The west jetty is marked by a light, and the east jetty by a daybeacon. A lighted bell buoy, about 1 mile north-northwestward of the entrance, marks the approach. In July 2000, the controlling depths were 5 feet in the east half and shoaling to bare in the west half west of the channel in about 41°45'18"N., 70°09'12"W., and thence in 1984, 4 feet in the basin except for shoaling along the east edge. The channel between the jetties and the harbor are subject to frequent shoaling, and local knowledge should be obtained before entering.

(119) **East Dennis** is a village 0.5 mile inland. The waters of the harbor are a **special anchorage**. (See 110.1 and 110.37, chapter 2, for limits and regulations.) The moorings and berths at the town marina are under the control of the **harbormaster**, whose office is on the west side at the town landing. A **speed limit** of 4 miles per hour is enforced in the harbor.

(120) Members of the Dennis Yacht Club moor their boats in the small bight on the west side of the channel just inside the west jetty. A marina, on the west side of the harbor about 0.35 miles southward of the jetty light, has depths of 6 feet reported alongside its service floats. The marina has a 20-ton mobile hoist for dry covered or open winter storage. Gasoline, diesel fuel, water, ice, provisions, marine supplies, guest berths, and charter fishing boats are available.

(121) About 250 yards southward of the marina is the town landing with ramps, two piers, and float landings at which berthing with electricity and water are available.

(122) A public small-craft launching ramp and an adjoining float landing are on the east side of the harbor, about 0.4 mile southward of the jetty light. Ample parking is available, and lodging can be obtained in town.

(123) **Rock Harbor**, on the south side of **Rock Harbor Creek**, is about 7 miles eastward of Sesuit Harbor. The centerline of the channel forms part of the boundary between the towns of **Orleans** and **Eastham**. A seasonal lighted bell buoy is about 1.7 miles west of the entrance, and a private 100° lighted range marks the entrance. The channel is marked by private seasonal bush stakes.

(124) In 1979, the approach from about 0.7 mile offshore to the channel entrance was bare at low water. The harbor is usually

entered 2 hours on either side of high water; local knowledge is advised.

(125) The Orleans town wharf and marina extends along the south and east sides of the harbor from the south jetty to the head. Party boats, draggers, yachts, and other small craft moor at the berths at which water and electricity are available; depths of 5 to 6 feet are reported alongside the berths. Gasoline and diesel fuel are available at a service wharf on the east side of the lower bend in the creek; depths of 5 feet are reported alongside the wharf. The Eastham town marina, on the west bank of the creek just above the lower bend, has a small-craft launching ramp. Another launching ramp is on the southern side of the harbor near the jetty. There is a **harbormaster**; the harbor is under the jurisdiction of the Selectmen of the towns of Orleans and Eastham.

(126) A naval aircraft bombing target **danger area** is centered in 41°49'46"N., 70°02'54"W. on the hulk of the former liberty ship JAMES LONGSTREET. (See 334.60, chapter 2, for limits and regulations.) The ship has been scuttled in 14 feet of water, with her hull showing above high water, about 2.5 miles northwestward of Rock Harbor. A seasonal lighted buoy is 250 yards westward of the hulk.

(127) **Wellfleet Harbor** is on the western side of the hook of Cape Cod, near its southern end. **Wellfleet** is a town at the head of the harbor. **Mayo Beach** is also at the head of the harbor. The sandspit extending eastward from **Shirrtail Point** is protected by stone revetment and is paved for a parking area for the town wharf and marina. The basin north of the spit has been developed into a large marina with floats and berths for small craft and yachts.

(128) **Prominent features.—Wellfleet Harbor Breakwater Light 14** (41°55.5'N., 70°02.1'W.), 16 feet above the water, is shown from a skeleton tower with a red triangular daymark on the end of the breakwater that protects the inner harbor and anchorages. The easterly of two church spires in the town of Wellfleet and a fire lookout tower in South Wellfleet are also prominent.

(129) **Channels.**—A dredged channel, marked by lighted and unlighted buoys and a light, leads from deep water in Wellfleet Harbor to a dredged anchorage basin southward of the town wharf at Wellfleet. In January 1995, the controlling depth was 9 feet to the anchorage basin, thence 8½ to 10 feet in the anchorage basin. Depths of 1 foot or less were located off the southwest corner of the town wharf. The channel is subject to frequent changes, and the buoys are moved to mark the best water.

(130) Private seasonal floats mark the channel leading from the anchorage into **Duck Creek** to the basin of the town marina. In 1979, the controlling depth in this channel was reported to be about 1 foot.

(131) **Anchorages.**—The inner harbor offers the best anchorages off the Wellfleet town wharf. In the outer harbor, northeast of **Smalley Bar**, the anchorage in depths of from 12 to 21 feet is somewhat exposed in westerly winds. In northerly gales vessels sometimes anchor on the lee side of **Billingsgate Shoal** in 12 to 42 feet; the shoal breaks the sea so that vessels with good ground tackle can ride out a heavy gale from northward.

(132) **Dangers.**—Extensive shoals are in the entrance. **Billingsgate Shoal** extends about 5.5 miles westward of **Billingsgate Island**, on the western side of the entrance to the harbor. The island is covered at high water. A lighted bell buoy marks the southwest end of the shoal. A sunken wreck is about 0.7 mile north of the buoy in about 41°49.5'N., 70°11.0'W. In September 1995, a dan-

gerous wreck was reported about 2 miles eastward of the sunken wreck in about 41°49'48"N., 70°08'36"W.

(133) The approach channel into Wellfleet outer harbor leads between the shoals and is narrow in places, but it is marked by unlighted and seasonal lighted buoys and is easily followed in daytime in clear weather. The breakwater that protects the inner harbor is reported to cover at extreme high tides. Bush stakes mark the clam and oyster flats in the inner harbor.

(134) **Tides and currents.**—The mean range of tide is 10 feet. The tidal currents at strength in the harbor entrance, north of Smalley Bar, average 0.7 knot on the flood and 0.5 knot on the ebb.

(135) The harbor is usually closed by ice during a part of each winter.

(136) **Harbor regulations.**—The town wharf, landings, and moorings in the harbor are under the control of the **harbormaster**, whose office is on the town wharf.

(137) **Small-craft facilities.**—The town pier and the town wharf extend southward and eastward, respectively, from Shirttail Point. The town pier has depths of 3½ to 7 feet reported along its south side, and 3 to 4 feet are reported alongside the floats on its north side; gasoline, diesel fuel by truck, water, and electricity are available. Floats with electricity and water are available on the north side of the town wharf; a small-craft launching ramp is on the south side. Hydraulic trailers at the town ramp can handle craft up to 45 feet for hull and engine repairs by local firms. Guest moorings in the anchorage area are under the control of the harbormaster. A snack bar, restaurant, and a marine supply store are at the shoreward end of the town wharf. Groceries and lodging are available within walking distance. The Wellfleet Yacht Club is at the west end of Mayo Beach.

(138) **Great Island**, on the western side of Wellfleet Harbor, is now part of the Cape Cod National Seashore under the U.S. Department of the Interior. Its beaches are open to pleasure boatmen who can either beach their boats or anchor a short distance offshore. Great Island has no facilities.

(139) **Chart 13249.—Pamet Harbor**, at the mouth of **Pamet River**, about 5.5 miles southeast of Provincetown, is a small harbor frequented by yachts and a few fishermen. Pamet River leads eastward to the town of **Truro**. The ruins of a railroad trestle are near the mouth of the river at the head of the harbor. The harbor is entered by a privately dredged channel that leads eastward between two jetties thence southeastward to an anchorage basin, about 0.3 mile above the jetties. In 1979, it was reported that the harbor could not be entered for 3 hours on either side of low water. The shoals which extend 1 mile off the entrance are changeable.

(140) A town small-craft launching ramp, beach, and parking lot are on the east side of the anchorage basin. The Pamet Harbor Yacht Club is just southward of the ramp. Water is available at the club. The harbor is reported to be a good small-craft refuge during hurricanes.

(141) **Provincetown Harbor**, formed by a turn in the northern end of the hook of Cape Cod, has a diameter of about 2 miles. It is one of the best harbors on the Atlantic Coast, having a sizable anchorage area in depths of 12 to 57 feet with excellent holding ground. Coasters and fishermen find protection here in gales from any direction.

(142) The historical town of **Provincetown**, on the northwest-ern side of the harbor, is at the site of the first landing of the

MAYFLOWER in the New World. It is the home port of numerous fishing, lobster, charter, pleasure, and sightseeing boats.

(143) (See page T-3 for **Provincetown climatological table**.)

(144) **Prominent features.—Pilgrim Monument**, a slim stone structure 348 feet above the water, which rises 252½ feet above **High Pole Hill** in Provincetown, is the most prominent landmark on the cape. **Race Point Light** (42°03.8'N., 70°14.6'W.), 41 feet above the water, is shown from a white tower on the northwest point of Cape Cod. A fog signal is at the light. An aero radiobeacon is close northeastward of the light. A fairway lighted bell buoy is 2 miles northwestward of the light.

(145) **Wood End Light** (42°01.3'N., 70°11.6'W.), 45 feet above the water, is shown from a 39-foot white square tower, near the water on the southern end of the hook of the cape. A fog signal is at the light. **Long Point Light**, 36 feet above the water, is shown from a white square tower at the eastern end of Long Point on the western side of the harbor entrance; a fog signal is at the light.

(146) Two standpipes about 0.2 mile westward of the monument, and a tank, about 1.5 miles northeastward of the monument, and several church spires in Provincetown are prominent from the bay. Several radar domes in North Truro are also prominent. A large white bathhouse, part of the Cape Cod National Seashore, is prominent on Herring Cove about 1.7 miles northwestward of Wood End Light.

(147) Prominent from the north are the observation tower and buildings of the former Race Point Coast Guard Station, about 1.4 miles northeastward of Race Point Light, and the aerolight at Provincetown Municipal Airport just southward of the station. The cupola of the Cape Cod National Seashore's Visitors Center, on **Ocean View Hill** about 0.8 mile southeastward of the station, is prominent from the north and east. At night Highland Light will show over the land westward of it when the entrance is approached on certain bearings.

(148) **Anchorage.**—Excellent anchorage may be had in Provincetown Harbor. Numerous fishing vessels work out of Provincetown during the year. During the summer months, private floats are set out that are capable of mooring vessels up to 40 feet in length. Larger vessels anchor from south to southwest of the westerly end of the breakwater, depending on draft. In addition, small craft sometimes anchor in **Herring Cove**, 0.8 mile southward of Race Point Light. A temporary lee from easterly winds is found well inshore in depths of 10 to 24 feet. Anchorage inside the breakwater is reported to be poor to fair due to soft bottom with much debris. The marina close southwest of MacMillan Wharf maintains 50 mooring buoys on the west side of the harbor.

(149) The Coast Guard Captain of the Port, Providence, has established a fairway 100 yards wide extending from

(150) 42°02'00.4"N., 70°09'33.1"W. to

(151) 42°02'43.4"N., 70°10'59.1"W., and in the area extending 100 yards around the piers in Provincetown. Anchorage is prohibited in this fairway.

(152) **Dangers.—Shank Painter Bar**, which extends to a maximum distance of 0.6 mile offshore between Race Point and Wood End Lights, rises abruptly from deep water. **Wood End Bar** is the continuation of the shoal that makes sharply into Wood End. A lighted bell buoy is about 0.6 mile southwestward of Wood End Light. A 2,500-foot stone breakwater is about 300 yards southeastward of the end of the town pier at Provincetown. The breakwater extends northeastward from a point in 42°02'45" N., 70°10'55"W., approximately parallel to the shoreline. The east

and west ends of the breakwater are each marked by a light. Strangers should exercise caution when operating in the area.

(153) **Caution.**—Shipping should keep a sharp lookout when navigating in the vicinity of Race Point, especially during periods of darkness and low visibility, because of the numerous fishing craft which operate in the area. There are large fishweirs in the harbor.

(154) **Tides and currents.**—The mean range of tide in Provincetown Harbor is 9.1 feet.

(155) The tidal current velocities between Race Point and Highland Light are very strong, but diminish to less than 1 knot between Highland Light and Chatham Light. The flood sets southwestward, and the ebb northeastward. Tide rips occur during heavy weather when the wind is against the current. Westward of the stretch of coast between Wood End and Race Point, the velocity at strength is about 1 knot. In this locality the ebb current sets northwesterly and the flood sets southeasterly. At the entrance and in the harbor the tidal currents have little velocity. The Tidal Current Tables should be consulted for current predictions.

(156) **Ice** forms only in severe winters in the harbor, and then only for short periods. There are recorded cases of fields of ice being driven northward from the shallow harbors of Cape Cod Bay into the harbor so as to close it briefly, but such cases are rare.

(157) **Harbor regulations.**—Moorings and berths at the town pier and all moorings in the harbor are under the control of the **harbormaster**, whose office is at the end of the town pier. The harbormaster monitors VHF-FM channel 16.

(158) **Provincetown Coast Guard Station** is about 0.4 mile southwest of the town pier. The finger pier close northeast of the Coast Guard pier is in ruins. Mariners should exercise caution while navigating in this area.

(159) Provincetown is a **customs station**.

(160) **Wharves.**—The town pier, known as MacMillan Wharf, is a long finger pier extending 1,300 feet into the bay from a large municipal parking lot. Two seafood-packing plants are on the outer end of the pier, which has a reported 13 feet alongside. There are several float landings along the southwestern side of the pier inshore of the packing plants, which are used by charter and sightseeing craft.

(161) The finger pier of a marina is about 120 yards southwestward of the town pier. Float landings are along the northeastern side of the pier, and gasoline and diesel fuel are available at the service float, which has 14 feet reported alongside. Guest berths with water and electricity are available. In 1979, depths of 10 feet were reported in the basin between the town pier and the marina's pier except for shoaling along the edges.

(162) In September 1981, an 8-foot shoal spot was reported in about 42°02'50"N., 70°10'56"W., in the approach to MacMillan Wharf and the finger pier about 120 yards southwestward of it.

Mariners are advised to exercise caution when operating in this area.

(163) **Supplies.**—Marine supplies, restaurants, laundromats, lodging, groceries, and shops of all kinds are available within walking distance in town.

(164) **Repairs.**—There is a boatyard with a marine railway about 0.5 mile southwestward of the town pier. Boats up to 80 tons or 70 feet long can be hauled out. Hull repairs can be made, and machine shop repairs can be made on short notice. Engine repairs are available.

(165) **Communications.**—Bus and taxi services are available throughout the year. During the summer, a commuter ferry runs between Provincetown and Boston. Throughout the year, regularly scheduled flights to Boston depart from the Provincetown Municipal Airport, which is about 2 miles northwestward of the town pier.

(166) **Chart 13246.**—From Race Point the Cape Cod shore curves northeastward, eastward, and then southeastward to the **Highlands**, a total distance of about 9 miles, and is composed of bare sand dunes of various heights. On the approach to the Highlands, the sand dunes are covered with brownish-looking growth of grass and the land is higher. The pitch of the cape at this point shows a high bluff on which stands Highland Light. At the Highlands, the shore may be safely approached as close as 0.5 mile, but the water shoals somewhat abruptly, and care must be taken not to go inside the 5-fathom curve. Much of the shoreline area of this portion of the lower cape is part of the Cape Cod National Seashore.

(167) **Peaked Hill Bar** includes shoals with a least depth of 10 feet about 3.5 miles northeast of Race Point Light. The bar is about 0.6 mile offshore and extends for about 4 miles paralleling the coastline. Vessels have grounded here, mainly because of failure to take soundings. This area should be given a berth of at least 2 miles. A lighted whistle buoy is about 2.5 miles off Peaked Hill Bar and about 5 miles northwestward of Highland Light. For northbound vessels, keeping in a depth of 20 fathoms will ensure passing 2.5 to 3 miles off the eastern side of Cape Cod and will lead to the lighted whistle buoy off Peaked Hill Bar.

(168) Between Race Point and Chatham Light, tidal current velocities are generally less than 1 knot. Strengths of flood and ebb set northward and southward, respectively, along the coast. The time of current changes rapidly, strength of flood or ebb occurring about 2 hours later off Nauset Beach Light than off Chatham Light.

(169) **Highland Light** (42°02.3'N., 70°03.7'W.), 173 feet above the water, is shown from a 66-foot white tower, with covered way to the dwelling, situated on the brow of a hill at the north end of the Highlands. A crenelated tower, a red brick stack, and three spherical radar domes on the summit of a hill, 0.5 mile south of the light, are prominent.

(170) The eastern side of Cape Cod is described in **United States Coast Pilot 2, Atlantic Coast, Cape Cod to Sandy Hook**.
